

## Electrical Engineering

Semester - IV						
S. No	Course Code	Course Name	L	T	P	C
1	EE208T	<u>Control Systems Engineering</u>	3	0	0	6
2	EE203L	<u>Control Systems Engineering Laboratory</u>	0	0	3	3
3	EE209T	<u>Introduction to Modern communication Systems</u>	2	0	2	6
4	EE202T	<u>Introduction to Electrical Machines (1<sup>st</sup> half)</u>	3	0	0	3
5	EE206T	<u>Introductions to Power Systems (2<sup>nd</sup> half)</u>	2	0	2	3
6	EE203T	<u>Introduction to Power Electronics (1<sup>st</sup> half)</u>	3	0	0	3
7	EE202L	<u>Electrical Machines and Power Electronics Laboratory</u>	0	0	3	3
8	CS101T	<u>Data Structures and Algorithms</u>	3	0	0	6
9	CS101L	<u>Data Structures and Algorithms Laboratory</u>	0	0	3	3
		<b>Total Credits</b>				<b>36</b>

# Electrical Engineering

<b>1</b>	<b>Title of the course (L-T-P-C)</b>	<b>Control Systems Engineering (3-0-0-6)</b>
<b>2</b>	<b>Pre-requisite courses(s)</b>	Signals & Systems (EE 210)
<b>3</b>	<b>Course content</b>	<ul style="list-style-type: none"> <li>- Basic concepts: Notion of feedback, open- and closed-loop systems.</li> <li>- Modeling and representations of control systems: Transfer function models for suitable mechanical, electrical, thermal and pneumatic systems, Ordinary differential equations, Transfer functions, Block diagrams, Signal flow graphs, State-space representations.</li> <li>- Performance and stability: Time-domain analysis, Second-order systems, Characteristic equation and roots, Routh-Hurwitz criteria.</li> <li>- Basic modes of feedback control: Proportional, Integral, Derivative.</li> <li>- Root locus method of design.</li> <li>- Frequency-domain techniques: Root-locus methods, Frequency responses, Bode-plots, Gain-margin and phase-margin, Nyquist plots.</li> <li>- Compensatory design: Proportional, PI and PID controllers, Lead-lag compensators.</li> <li>- State-space concepts: Controllability, Observability, pole placement result, Minimal representations.</li> </ul>
<b>4</b>	<b>Texts/References</b>	<ol style="list-style-type: none"> <li>1. Norman Nise, Control System Engineering, Wiley, 6th Edition, 2011.</li> <li>2. K. Ogata, Modern Control Engineering, Pearson, 5th edition, 2010.</li> <li>3. Gene Franklin et. al., Feedback Control of Dynamic Systems, 7th Edition, Pearson.</li> <li>4. B. Kuo, Automatic Control System, Wiley, 9th Edition, 2014 Dorf and Bishop, Modern Control Systems, 8th Edition, Addison Wesley.</li> </ol>

# Electrical Engineering

1	<b>Title of the course</b> (L-T-P-C)	<b>Control Systems Engineering Laboratory</b> <b>(0-0-3-3)</b>
2	<b>Pre-requisite</b> <b>courses(s)</b>	Signals & Systems (EE 210)
3	<b>Course content</b>	Experiments based on the contents of the “Control Systems” course. Experiments include modeling of physical systems including DC & Stepper motors, speed & position control of DC & Stepper motors, temperature control, controller design including P, PI, PD and PID controllers. Time permitting, experiments using robotic arms will be introduced.
4	<b>Texts/References</b>	<ol style="list-style-type: none"><li>1. Norman Nise, Control System Engineering, Wiley, 6th Edition, 2011</li><li>2. K. Ogata, Modern Control Engineering, Pearson, 5th edition, 2010.</li><li>3. Gene Franklin et. al., Feedback Control of Dynamic Systems, 7th Edition, Pearson</li><li>4. B. Kuo, Automatic Control System, Wiley, 9th Edition, 2014</li></ol> Dorf and Bishop, Modern Control Systems, 8th Edition, Addison Wesley

# Electrical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Introduction to Modern communication Systems (2-0-2-6)</b>
2	<b>Pre-requisite courses(s)</b>	Introduction to Probability (EE 221) and Signals & Systems (EE 210)
3	<b>Course content</b>	<p><b>Theory:</b></p> <ul style="list-style-type: none"> <li>- Motivation towards designing Analog and Digital Communication Systems</li> <li>- Baseband and passband signals</li> <li>- Analog modulation techniques (Amplitude Modulation and Angle Modulation)</li> <li>- Introduction to Random Processes: Definition, Autocorrelation Functions, Power Spectral Density, Random processes through LTI systems, noise as random processes.</li> <li>- Overview of digital modulation: Signal Constellations, Hypothesis Testing, ML and MAP detection rules, performance analysis of selected digital modulation schemes, and its relevance in 5G and beyond communication systems.</li> </ul> <p><b>Laboratory:</b></p> <ul style="list-style-type: none"> <li>- Basics of MATLAB: variables, plots, loops, conditional statements</li> <li>- Basic experiments from Signals and Systems: Convolution, LTI systems, power and energy of signals, simulating analog signals on MATLAB</li> <li>- Practical experiments in-line with the course contents covering transmission and reception mechanisms corresponding to analog and digital communication. Introduction to the usage of software defined radios and MATLAB Analog modulation and demodulation</li> </ul> <p>Digital modulation and demodulation – BPSK, QPSK and 16-QAM</p>
4	<b>Texts/References</b>	<ol style="list-style-type: none"> <li>1) Upamanyu Madhow, “Introduction to Communication Systems,” Cambridge university press, 2008 edition.</li> <li>2) Simon Haykin, “An Introduction to Analog and Digital Communication,” Wiley India Pvt. Ltd., 2006.</li> <li>3) B. P. Lathi and Zhi Ding, “Modern Digital and Analog Communication Systems,” Oxford higher education, 2017.</li> </ol>

# Electrical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Introduction to Electrical Machines (2-1-0-3)</b>
2	<b>Pre-requisite courses(s)</b>	<b>Network Theory</b>
3	<b>Course content</b>	<p>Transformer: Magnetic Circuits, principle of transformer action, equivalent circuits, phasor diagram, efficiency, basics of three phase transformer.</p> <p>Synchronous Machines: induced emf and torque in a rotating coil, rotating magnetic field, construction of synchronous Machines, induced emf, phasor diagram, equivalent circuit, OCC- SCC, power angle characteristics, V-curve and inverted V curve.</p> <p>Other topics: introduction to Induction Motor, introduction to DC Machine, Application of Electrical Machines and special electrical motors.</p>
4	<b>Texts/References</b>	<ol style="list-style-type: none"><li>1. P. S. Bimbhra, "Electrical machinery," Khanna Publishers, 7<sup>th</sup> edition, 1977.</li><li>2. M. G. Say, "The Performance and Design of Alternating Current Machines," CBS, 3<sup>rd</sup> edition, 2002.</li><li>3. Stephen Chapman, "Electric Machinery Fundamentals," McGraw Hill, 4<sup>th</sup> edition, 2017.</li><li>4. D.P. Kothari, I.J. Nagrath, "Electric Machines," McGraw Hill, 5<sup>th</sup> edition, 2017.</li><li>5. A Fitzgerald, Charles Kingsley, and Stephen Umans, "Electric Machinery," McGraw Hill, 6<sup>th</sup> edition, 2017.</li></ol>

# Electrical Engineering

<b>1</b>	<b>Title of the course (L-T-P-C)</b>	<b>Introduction to Power Electronics (2-1-0-3)</b>
<b>2</b>	<b>Pre-requisite courses(s)</b>	Electric circuits, Devices
<b>3</b>	<b>Course content</b>	Introduction to power semiconductor devices, drive circuits, Rectifiers - single and three phase; basics of inverters - single and three phase; PWM generation, DC/DC converters - Buck, Boost and Buck Boost. Basics of magnetic circuits
<b>4</b>	<b>Texts/References</b>	<ol style="list-style-type: none"><li>1. L. Umanand, ``Power Electronics – essentials and applications," Wiley 2009.</li><li>2. M. H. Rashid “ Power Electronics,” Pearson. 4th edition, 2017.</li><li>3. Cyril W Lander, “Power Electronics” The McGraw-Hill Companies, 3rd ed, 1993.</li></ol>

# Electrical Engineering

<b>1</b>	<b>Title of the course (L-T-P-C)</b>	<b>Introductions to Power Systems (3-0-0-3)</b>
<b>2</b>	<b>Pre-requisite courses(s)</b>	<b>Network Theory, Introduction to Electrical Machines</b>
<b>3</b>	<b>Course content</b>	<p>Introduction: Evolution of Power Systems, Energy Sources Structure of Bulk Power Systems, Power generation concepts, ac and dc transmission concepts, Basic three phase system concepts</p> <p>Transmission lines: Models and performance of transmission lines and cables</p> <p>Insulators: different types, Electric field distribution and insulators</p> <p>Power Flow: modelling of generators, transformers, lines and loads, per Unit Systems, Bus admittance matrix, Gauss Seidel and Newton-Raphson load flow methods</p> <p>Introduction to next course: introduction to faults, power system protection, stability, operation, blackout</p>
<b>4</b>	<b>Texts/References</b>	<ol style="list-style-type: none"> <li>1. Grainger and Stevenson , “Power System Analysis,” 1<sup>st</sup> edition, McGraw Hill, 2017.</li> <li>2. Bergen and Vittal, “Power System Analysis,” 2nd Edition, Pearson 2002.</li> <li>3. O E. Elgerd, “Electrical Energy Systems Theory,” 2<sup>nd</sup> edition, McGraw Hill, 2017.</li> <li>4. Wollenberg, “Power Generation, operation and control,” 2<sup>nd</sup> edition, Wiley, 2006. Nagrath and Kothari, “Power System</li> </ol>

## Electrical Engineering

1	<b>Title of the course</b> (L-T-P-C)	<b>Electrical Machines and Power Electronics Laboratory</b> <b>(0-0-3-3)</b>
2	<b>Pre-requisite</b> <b>courses(s)</b>	Nil
3	<b>Course content</b>	Experiments reinforcing concepts learnt in EE206
4	<b>Texts/References</b>	

# Electrical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Data Structures and Algorithms (3-0-0-6)</b>
2	<b>Pre-requisite courses(s)</b>	Exposure to Computer Programming
3	<b>Course content</b>	Introduction: data structures, abstract data types, analysis of algorithms.  Creation and manipulation of data structures: arrays, lists, stacks, queues, trees, heaps, hash tables, balanced trees, tries, graphs. Algorithms for sorting and searching, order statistics, depth-first and breadth-first search, shortest paths and minimum spanning tree.
4	<b>Texts/References</b>	<ol style="list-style-type: none"><li>1. Introduction to Algorithms, 3rd edition, by T. Cormen, C. Leiserson, R. Rivest, C. Stein, MIT Press and McGraw-Hill, 2009.</li><li>2. Data structures and algorithms in C++, by Michael</li><li>3. T. Goodrich, Roberto Tamassia, and David M. Mount, Wiley, 2004.</li></ol>

# Electrical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Data Structures and Algorithms Laboratory (0-0-3-3)</b>
2	<b>Pre-requisite courses(s)</b>	Exposure to Computer Programming (CS 102)
3	<b>Course content</b>	Laboratory course for CS 211 is based on creating and manipulating various data structures and implementation of algorithms.
4	<b>Texts/References</b>	<ol style="list-style-type: none"><li>1. Introduction to Algorithms, 3rd edition, by T. Cormen, C. Leiserson, R. Rivest, C. Stein, MIT Press and McGraw-Hill, 2009.</li><li>2. Data structures and algorithms in C++, by Michael T. Goodrich, Roberto Tamassia, and David M. Mount, Wiley, 2004.</li></ol>
